World class poultry farms
- solutions for the greatest farmers in the world
Customer satisfaction

Our ambition is to build a lasting relationship of trust with each and every customer
Profit-driven success in poultry production

Increased profits and efficiency combined with better animal welfare are the key factors for success for SKIOLD’s customers within the poultry industry all over the world. Our customers – or as we prefer to see them – our partners choose to work with Danish-based SKIOLD due to our extensive experience within the design and production of state-of-the-art equipment and solutions.

Total Solutions for Poultry Farms

SKIOLD is a Danish-based company with a 140-year track record of developing and producing agricultural solutions of the highest quality and craftsmanship. With our roots deeply seated in the Danish agricultural tradition, and with 21st century technology, we offer solutions ranging from single machines to entire turnkey farm projects within feed milling, pig farms, seed processing and grain handling.

Now, with the acquisition in 2018 of LANDMECO, SKIOLD brings its experience and knowhow into total solutions within feed milling and farm equipment for poultry farms. Danish-based LANDMECO is renowned for poultry farm equipment of the highest quality and for its innovative solutions ensuring world-class productivity, animal welfare, and profitability.

Adding Value to Poultry Farms

We don’t just supply world-class poultry farm equipment. We create additional value for your business. We do so by insisting on an open dialogue, long-term cooperation and quality in every single detail.

Our research and development teams develop future-proof equipment of the highest caliber – but we always see you as an important resource as well. Your wishes, your knowhow and your insights are all valuable assets that help create the best possible solution for your poultry farm projects.

Optimal and cost-efficient solution based on life-long knowhow within poultry feeding based on modern technology.
We Supply it All

We provide complete farm solutions. You can rely on us to provide every single piece of equipment you need for your poultry farm – from feed mills to heating, drinking and feeding systems.

Broiler Feeding System for Faster Growth

The LANDMECO patented pan-feeding system makes growth faster and more efficient. With the unique pan design, the chicks will learn proper feeding behavior from day one. With it, chicks grow faster and reach their target weight in less time, making your entire operation far more profitable.

Benefits for the Investors

As an investor, you require assurance that your investment will pay off. We deliver a proven product line with multiple installations across the world – our experience is your assurance of high return on your investment.

Efficient operation, superior poultry equipment products and high return on investment – that is what you can expect us to deliver.

Benefits for the Farmer

We specialize in farm optimization based on the production design and the desired end weight of the poultry. Better profitability is a result of better animal welfare, lower feed costs and lower staff costs. This is only possible if the equipment is modern, efficient and easy to use – and ours is. Ultimately, you can rely on us to install a farm for you that is much more profitable and makes your daily operation much easier.

We are much more than Broilers

We offer full line poultry equipment both within broilers, breeders, rearing and layers.

"Patented unique solutions, will ensure you the best possible results."
Take control of feed quality

One sure way of reducing cost and making your operations better is to run your own feed mill. Retake control of the quality and composition of your feed and reduce your costs at the same time – and experience improvements in the overall quality of your end product.

With your own feed mill, you will be able to supply fresh feed for your chickens with higher nutritional value and a more uniform quality. This can mean less scraping and a much higher FCR (Feed Conversion Ratio) with faster growth and more efficient use of resources as a result.

We can provide you everything from basic feed mill plants to large, fully automated plants with PC controlled tracking and management information.

What it means for you

- Full traceability
- Cost-effective supply chain
- High food safety
- Faster adjustments to feed composition
- Full control of everything.

SKIOLD has decades of experience in planning, designing and constructing feed mill systems for large or small farms – help you save money and raise your end product quality.

“Superior feed quality ensures you the most profitable operation, health, growth and feed conversion rate for your livestock.”
Some of our Poultry Customers Worldwide

We specializes in total solutions for poultry farms of any size. With farms installed all over the world, and decades of international and local experience, we can act as your guide every step of the way.

AgroAves Group, second largest poultry producer in Lithuania, produces 26,000 tons poultry meat per year and expects to increase production to 30,000 tons. AgroAves Group previously purchased their feed but expects to be able to earn back the investment within four years by producing their own feed with a full-line solution from SKIOLD; a feed mill project for poultry feed 15 t/h including grain handling, cleaning, drying and storage.

Kjeld & Gerda Andersen’s newest broiler house is 6,278 m² (146 meters long and 43 meters wide). The house has a capacity of 130,000 broilers per rotation. It is Denmark’s biggest broiler house. The 1,880 feeding pans, which have been delivered, amount to a total of 1,88 km of feeding space for the animals. In total, there has been installed 20 feeding lines and 22 drinking lines each of 71.5 meters with 2 rows per hoist. “The work has been carried out professionally and with an ambitious staff. The job was delivered on time and as planned and I am very satisfied with that”, says Kjeld Andersen.

One of our very satisfied clients in Sri Lanka were so pleased with the solution in their 3 two-storey broiler houses with a capacity of 150,000 broilers, that they have just ordered again for a new three-storey house with a capacity of 75,000 broilers including the LANDMECO pan feeding system, drinking system and augers. This house is part of a bigger project with several three-storey broiler houses.

Owner of a feed milling plant for 29,000 layer hens, Mr. Mr Modery from SAS Oefs Modery says: “The feed mill has permitted me to obtain better results at my chicken farm with regard to both productivity and the quality of the eggs, specifically the egg shells. We have halved our scrapping. This is very advantageous because scrapping is a great cost both in terms of time and profitability. That is a significant gain. We always seek to get closer to the need of the hen. Do not be afraid to change the feed formulation. Today I can produce my own feed. This allows me to reduce the feed cost which, when buying it, varies according to the exchange rate of the cereals and raw materials”.
